

Extreme Remote Power

TrailCHARGE™

The TrailCHARGE™ is a rugged, portable solar power generator used to charge batteries and operate remote electrical devices. The TrailCHARGE™ is built with high-efficiency silicon solar cells and a rugged urethane construction. It is an excellent source of electricity in remote locations.

The TrailCHARGE™ is used to charge batteries on mobile phones, PDA's, MP3 players, cameras, flashlights, automobile batteries and laptops, as well as many other electronic devices. It is used outdoors for camping, boating, hunting, or in emergency disaster areas. It is extremely rugged and lightweight, making the TrailCHARGE™ an ideal backpacking/ expedition power source. Contact us at sales@trail-power.com or call 1-303-972-1959 for more information.

Included cabling:

- Power conversion module to provide USB power through a USB connector
- Vehicle battery charging cable set
- Generic cigarette lighter adapter

Can be used to:

- Charge the TrailBATT™ Lithium Polymer battery pack
- Provide power to USB devices
- Charge an automobile battery
- Charge mobile phones, laptop computers, MP3 players, flashlight batteries etc.

Electrical Specifications	
Power	26 Watts
Current	2.2 amps MAX
Output	0-22 Volts (12V nominal)

Dimensions and Weight	
Weight (lbs)	4.6
Dimensions (folded)	17" x 8" x 2"
Dimensions (deployed)	39" x 17" x 3/4"
